S series

Superclean Sheet Cleaning Machines

The Superclean 2020 Sheet Cleaner utilises Superclean Contact Cleaning Rollers and Superclean Adhesive Rolls to permanently remove particles from the surface of any flat substrate or roller surface. The surface of Contact Cleaning Rollers is critical to their performance, and at KSM we ensure that the surface is engineered to deliver the highest performance of contamination removal.

Our experience and expertise in contact cleaning ensures that we understand the application and process into which our machines are integrated, from which we determine roller shore hardness, surface finish and machine specifications to deliver long term reliable performance. The SC S series is suitable for PCB, SMT, hybrid, OLED and touch screen applications to:

Reduce scrap

Reduce open / short circuits

Reduce re-work

Increase production 1st time pass yield

Elevate profits

Designed and built by engineers with decades of experience in contact cleaning and in the provision of smart automation solutions to both the electronics and a broader industry sector, the KSM SCS range enables the manufacturer to produce greater yields with less waste and drastically reduced defects. The SCS range is available in both stand-alone and in-line configurations and is the result of detailed feedback from the market with regard to material handling.

The SC S series can be supplied in the following widths:

350mm

650mm

850mm
